PROFESSIONAL SUMMARY

Results-driven Java Backend Engineer with 1+ year of experience building scalable, high-performance distributed systems across fintech and enterprise domains. Proven expertise in Java, Spring Boot, Microservices, REST/gRPC APIs, and Design Patterns — delivering 25% throughput gains, 30% latency reduction, and 99.9% transaction reliability at scale. Adept at securing backend systems with Spring Security, JWT, and RBAC, while enforcing clean code standards with 90%+ test coverage. Skilled in Multithreading, Concurrency, and System Design, while accelerating sprint delivery by 15% in Agile environments. Passionate about engineering excellence and measurable business impact.

PROFESSIONAL EXPERIENCE

Java Developer

[Quba Infotech](#)

August 2025 — Present

Chhapi, Gujarat, India

- Architected and deployed scalable backend services using Java and Spring Boot, resulting in a 25% increase in system throughput through strategic schema design and query optimization.
- Engineered high-performance RESTful APIs and integrated third-party systems, reducing API latency by 30% through Redis caching and indexed database queries.
- Enhanced system security and reliability by implementing Spring Security with JWT Authentication and Role-Based Access Control (RBAC), ensuring secure access and data integrity for sensitive user operations.
- Led peer code reviews and enforced clean coding standards while collaborating in an Agile environment, accelerating sprint delivery by 15% across cross-functional teams.

Java Developer Trainee

[HulkHire](#)

June 2025 — July 2025

Remote

- Architected and developed a high-performance payment integration system using Microservices Architecture, simplifying PSP integrations and providing a unified merchant interface.
- Engineered a validation microservice using Spring Security Filters and HMAC SHA-256, ensuring request authenticity and preventing Man-in-the-Middle (MITM) attacks across financial transactions.
- Reduced API latency by 30% through Redis caching for merchant lookups and optimized SQL indexing for efficient transaction state management.
- Eliminated duplicate transaction risks by implementing a Business Rule Engine with idempotency validation and threshold-based rate limiting on payment attempts.

PROJECTS

QM Business Suite [Link](#)

- Architected and developed scalable backend for a comprehensive business accounting platform with 20+ interconnected modules, designing RESTful APIs that handle end-to-end business workflows from procurement to payment reconciliation.
- Engineered a GST compliance engine supporting GSTR-1, GSTR-3B, and HSN Summary reporting with automated tax calculation, reducing manual tax filing effort by 35% and ensuring 100% statutory compliance.
- Built a real-time financial reporting suite including Profit & Loss Account, Cash Flow statements, and aging-based receivables/payables analysis, accelerating month-end financial closing by 45%.
- Designed and implemented a multi-warehouse inventory backend with full stock traceability, automated low-stock alerts, and warehouse-to-warehouse transfer APIs, eliminating manual stock reconciliation across distributed locations.
- Implemented enterprise-grade backend security using Spring Security, JWT Authentication, and fine-grained RBAC with module-level permission controls, ensuring data integrity and secure multi-user access across all business operations.
- Developed Employee Management and Payroll backend integrating biometric attendance via fingerprint and eye recognition devices, automating salary computation, deductions, and payslip generation based on real-time attendance data.
- **Tech stack:** Java | Spring Boot | Spring Security | JWT | RBAC | Spring Data JPA | Hibernate | PostgreSQL | Redis | REST APIs | Swagger/OpenAPI | Docker | Microservices | Apache Kafka

Payment Integration System

- Architected a multi-PSP Payment Integration System using Microservices Architecture with three dedicated services — Validation, Processing, and Provider — providing a unified payment interface for merchant applications to integrate PSPs like Stripe, PayPal, and Trustly via a single API. procurement to payment reconciliation.
- Engineered a Validation Microservice as the first entry point for all payment requests, implementing HMAC SHA-256 signature verification via Spring Security Filters to prevent Man-in-the-Middle (MITM) attacks and ensure 100% request integrity across all financial transactions.
- Implemented a Business Rule Engine with idempotency validation, duplicate transaction detection, and threshold-based rate limiting on payment attempts, reducing duplicate transaction processing incidents by 50%.
- Designed an end-to-end webhook-driven transaction lifecycle handling real-time PSP callbacks — Credit, Pending, Cancel, and Debit events — ensuring accurate transaction state management and 99.9% payment reliability.
- Built centralized Global Exception Handling using @ControllerAdvice with structured error responses and custom error codes, reducing merchant-side debugging and integration time by 40%.
- Optimized system performance through Redis caching for merchant lookups and indexed SQL queries for transaction state management, achieving 30% reduction in API latency across high-volume payment flows.
- **Tech stack:** Java | Spring Boot | Spring Security | HMAC SHA-256 | Microservices | REST APIs | MySQL | Redis | JUnit | Mockito | Docker | Swagger/OpenAPI

SKILLS

Languages Java, HTML5, CSS3
Backend Frameworks Spring Boot, Spring Security, Spring Data JPA, Hibernate
Architecture & APIs Microservices, REST APIs, gRPC, API Design & Versioning, Swagger / OpenAPI, Design Patterns
Databases & Caching PostgreSQL, MySQL, Redis
Testing & Code Quality JUnit, Mockito, SonarQube
Messaging & Streaming Apache Kafka, RabbitMQ
DevOps & Containers Docker
Tools & Platforms Git, GitHub, Postman, JIRA, IntelliJ IDEA, Maven
Methodologies Agile, Scrum

CERTIFICATIONS

Java Programming Fundamentals, Infosys Springboard June 2025

EDUCATION

Master of Science in Information Technology (MSc IT) in Information Technology, 2025 — 2027
Gokul Global University Siddhpur, Gujarat

Bachelor of Science in Information Technology (BSc IT) in Information Technology, 2022 — 2025
Hemchandracharya North Gujarat University Patan
